

Simplify shipping with
an all-in-one solution.

Is this your shipping journey?

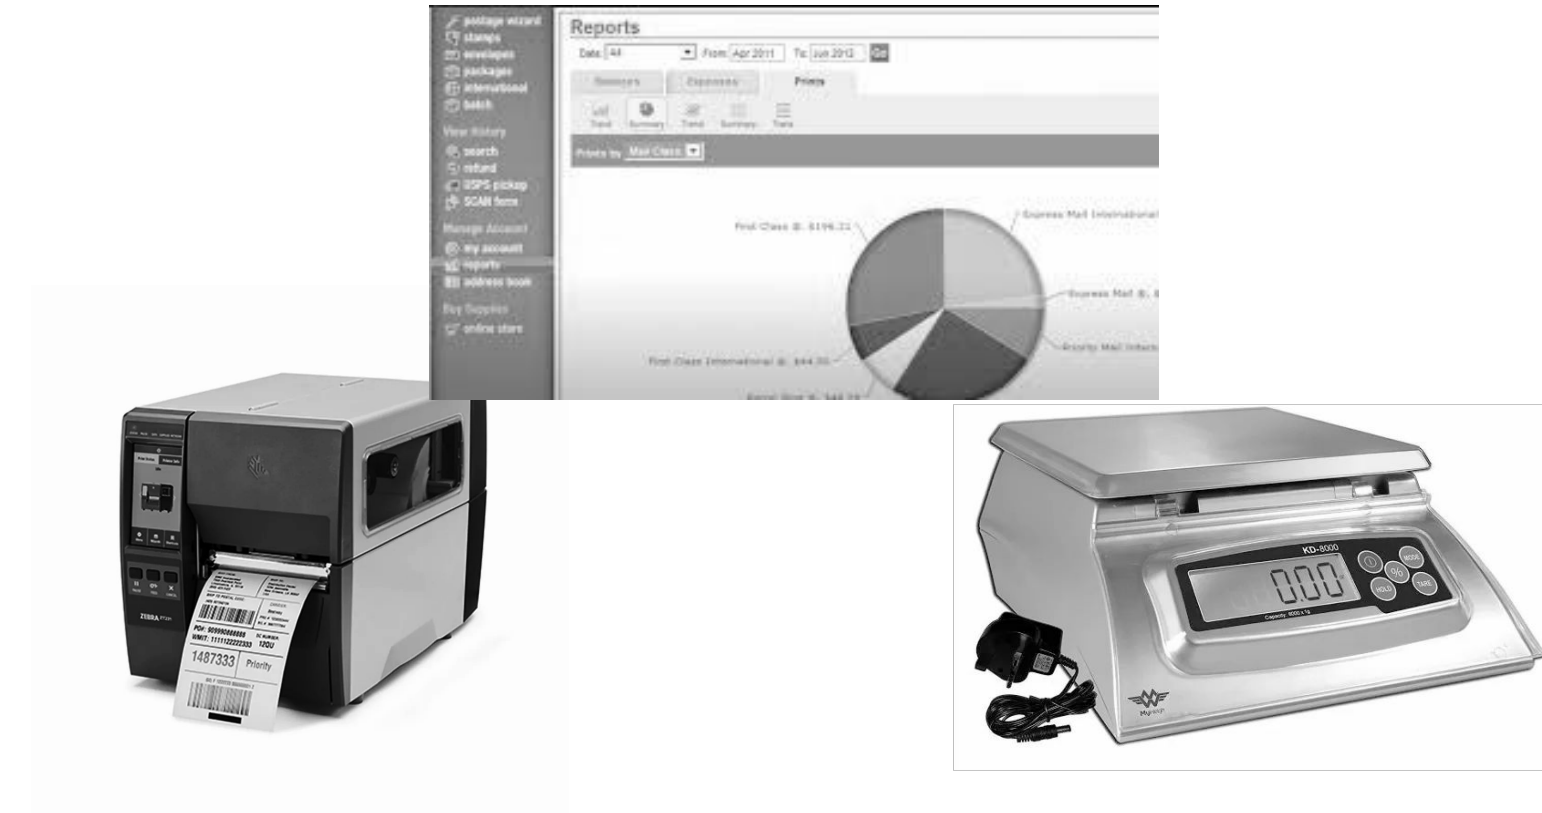

- No clear process, maybe an ancient postage meter somewhere in the mail room
- Emails, phone calls, slack messages and back and forth just to confirm what needs to be shipped
- Someone designated as the “shipping person” even though this is not their job description
- Running around to try and find a scale to weigh the parcel
- Printing the “label” on paper and hoping that taping it to the parcel will suffice

Does this look familiar?

\$1000's spent to rent a letter machine, when you mostly send parcels, and no-one can remember their pins and codes to use the number pad.

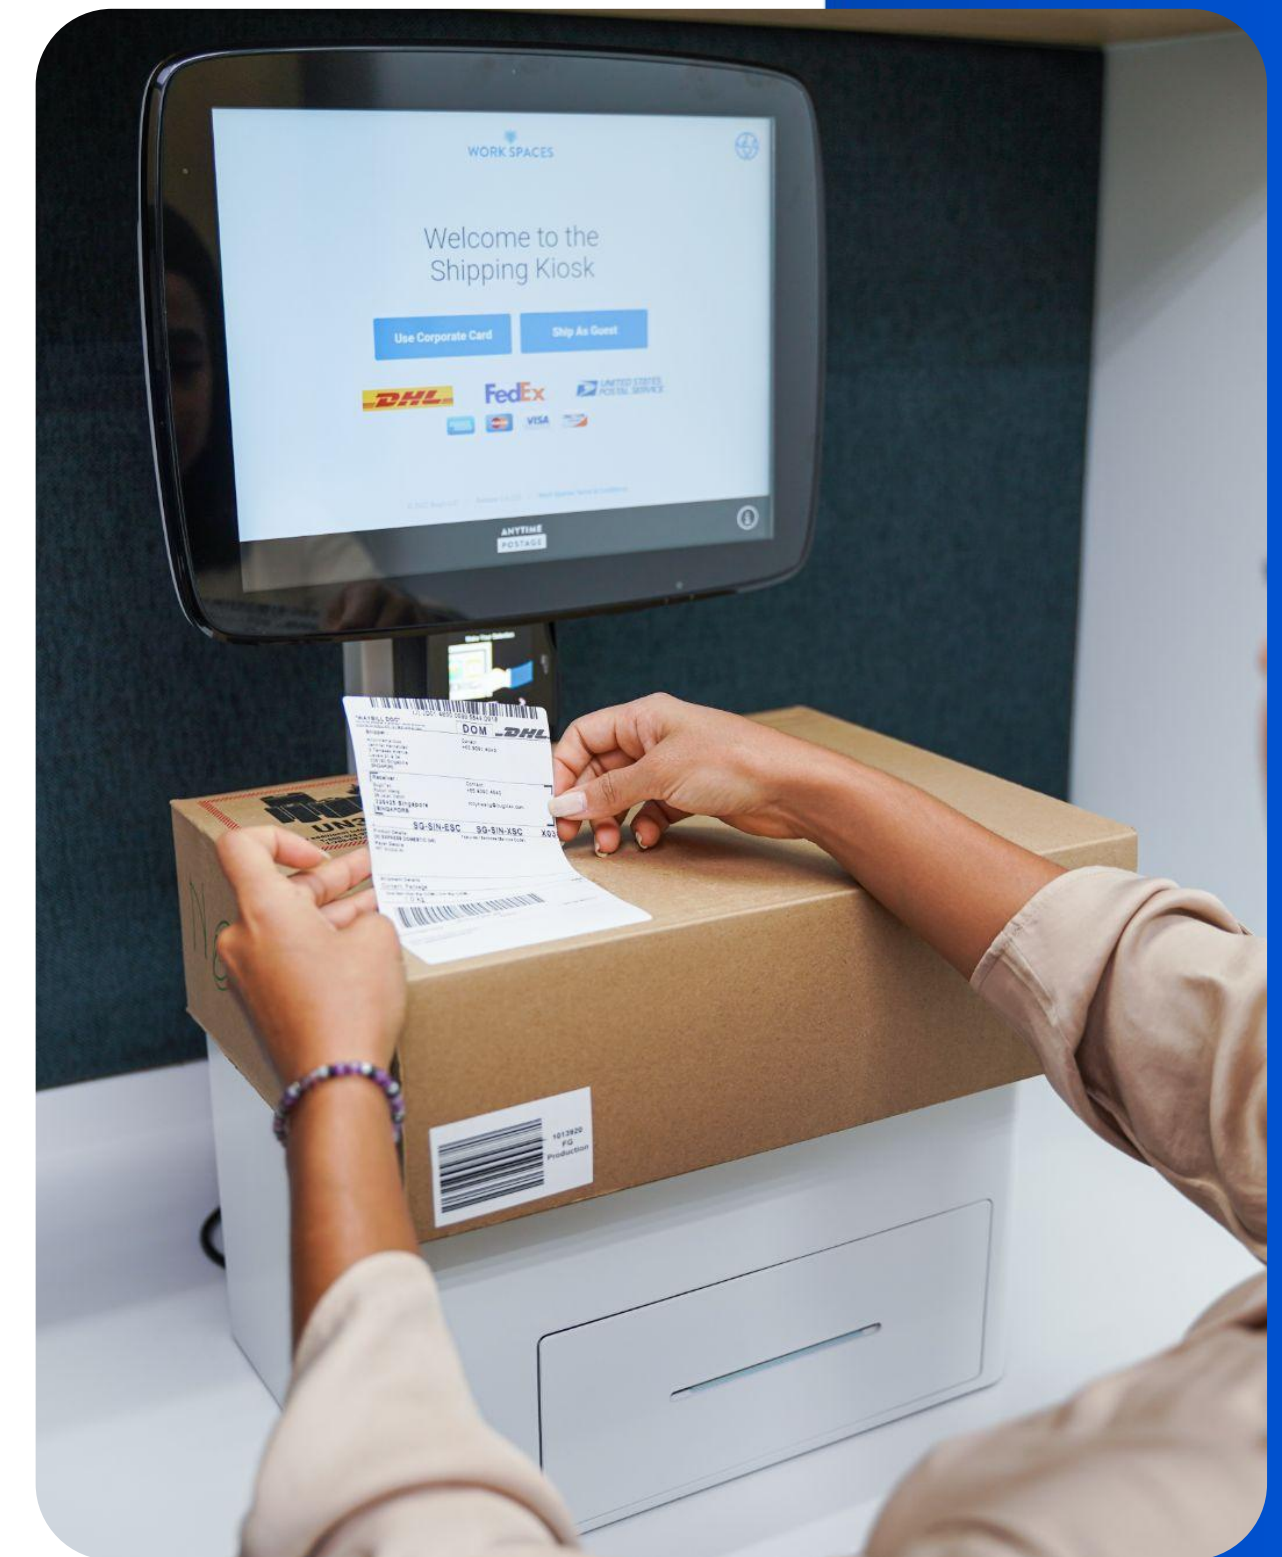

A disjointed, chaotic process led by one person's login to an online parcel merchant and various peripheral devices lost around the office.

What if you could have an *all-in-one* solution?

Rooster Print & Mail offers an all-in-one Shipping Kiosk

- It takes the best of both worlds from postage meters and online shipping software, with a simple easy to use functionality
- It allows all your employees or customers to ship parcels, letters, anytime, anywhere
- With ATP you'll be shipping compliant labeled parcels and letters at great rates with a simple all-in-one solution and if you are a customer facing business, you can offer the kiosk as an all star amenity that also generates you revenue

The Shipping Kiosk Explained

Technical Specs

- **Dimensions**
28" x 15" x 12"
(70cm x 37cm x 30cm)
- **Connectivity options**
Wi-Fi or LAN, Cellular
Signal
- **Weight capacity**
Parcels up to 70 lbs (31 kg)
- **Power requirements**
220v or 120v
- **Direct Thermal Shipping Label (Consumable)**
4" x 6" (10cm x 15cm)

Set up for key carrier accounts right out of the box with
the option to add more

All-in-One Display & Software:

Enter shipping details remotely, or via the touch screen and finalize at the kiosk

Integrated Certified Scale:

Accurate weight measurements (up to 31kg/70lbs) ensure precise shipping charges

Thermal Label Printer:

Perfect-quality shipping labels every time, no ink

Connectivity Options:

Supports both Wifi and Ethernet

Custom Branding Available:

White-labeled devices for corporate identity

How does it work?

Set it up:

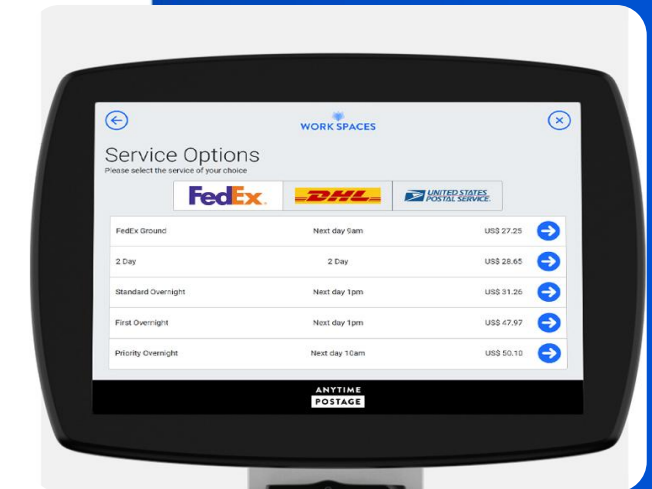

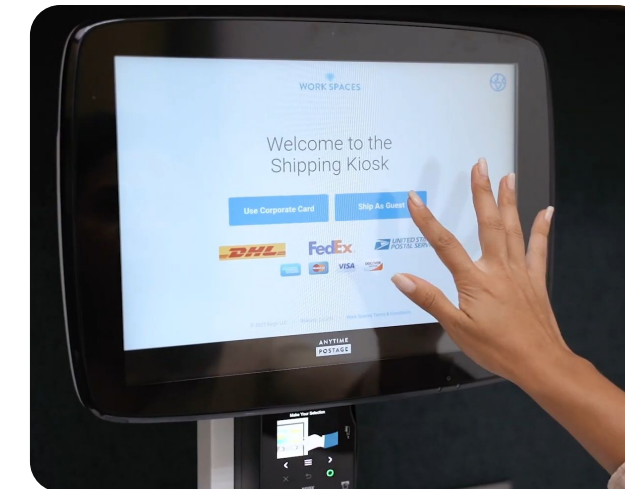

- Integrate the carriers you use / need with our onboarding team
- Set as customer facing or internal use, so the payment process can be established

Use the kiosk:

- Either on the web app or on the kiosk touch screen, enter the shipping details (or bulk upload)
- Head to the kiosk and weigh your item(s) confirming dimensions using the inbuilt ruler
- Select the final carrier option from the marketplace (which is customisable for what you want to show employees or customers)
- The thermal printer will print the compliant label, simply affix and then store for collection or drop off at relevant drop point (depending on your contract)

If Customer facing:

- *Your customers will follow the same process, and simply pay via card or phone wallet prior to printing the label*
- *You can set the margin per transaction, and customise all customer facing fees*

How does it compare?
